

Good intentions can result in Big Problems

August 31, 2024

The claim from Jeff Bongiorno about there being a 'massive breach' Dominion's server is **NOT TRUE!!!** I'm trying to reach him to let him know. If you know him or you are him, please contact me! This is the kind of thing that happens when someone thinks they know more than they do, and jumps to conclusions without having it reviewed by people that have more knowledge. I certainly am not a fan of Dominion, and am perfectly happy to shine a light on what they do that is wrong, but in this case, I must defend Dominion on this because this claim being made is UNTRUE. The claim is that this an indication of a virus:

BOUNGIORNO: Palm Beach County Election Infrastructure Breach Proven

Why is this important? The idea of timestamps is included in all operating systems. These are helpful for classifying files and carrying out change tracking because they provide information on when a file was created, last edited, etc. Timestamps can be used to identify the files that may have been part of a specific attack. The goal of timestomping is to make event investigation and response more difficult. This confirmation of this attack exists inside the FMS server, as shown in evidence 5.

Someone mistook uncompressed virus definitions in the pagefile as nefarious commands in the voting system. It is a **FALSE POSITIVE** and will serve only as a distraction and discredit vector for legitimate work and people. The part of the screen he shows is the part of the virus definitions for PowerShell/Timestomp.A and PowerShell/Timestomp/G viruses. Here are the Microsoft links on them:

Virus definitions are benign parts of a computer virus that the antivirus engine uses in order to detect the real virus. The names of the viruses are actually there in the screen shot, but

someone that doesn't have the proper knowledge/experience may not realize what they are looking at. I'm not saying he is lying to be malicious. I have no reason to believe it is anything other than an honest mistake at this time.

It is incredibly important that any claims are peer reviewed by people with the proper knowledge and experience to discern fact from fiction. We cannot afford the movement to secure our elections to be discredited, or anyone in our movement to be discredited.

Where did Jeff get this? Well, he got it from a previously-DEBUNKED 'Mesa County EMS Server 2020 Election Investigation' done by Josh Merritt. The report that Josh produced was full of assumptions and incorrect conclusions. That was communicated to Josh, but he refused to listen. I'm not sure why anyone with integrity would push something that is factually false and misleading unless they are attempting to discredit and distract people. I'm sorry to see that his work is still causing damage to people's reputation.

Here is a screen shot from the video in the article, showing the same document that I already debunked in March 2023:

DO NOT SHARE THE LINK BELOW BECAUSE IT IS NOT TRUE. I am including it only for reference.

[UPDATE – BOUNGIORNO: Palm Beach County Election Infrastructure Breach Proven](#)

I have already let Miami Independent know this and suggested they take it down. They have put a notice on their page with a reference to this page.
